

# FleetSafer Vision

THE WORLD'S FIRST DISTRACTED DRIVING SOLUTION THAT DOES NOT REQUIRE SOFTWARE ON PHONES.

FleetSafer™ Vision is a cloud-based software service that integrates telematics data (trip information, location, speed, etc.) with mobile device usage data (phone calls, text messages, etc.) and other information (email logs, weather, traffic, etc.) so telematics-equipped fleet operators can:

- Measure cell phone use (any phone) while driving
- Alert drivers to their compliance/non-compliance status
- Highlight high risk drivers
- Complement existing GPS/Telematics solutions
- Support safety recognition programs

Say hello to FleetSafer Vision, the smartest and most flexible way to manage and monitor phone use while driving.

## FleetSafer Vision's Features Include:

### Device-Independent Reporting

- Works with any type of phone
- Shows phone and SMS use while driving (email use also available)
- Integrates with major GPS/Telematics providers
- Supports most major wireless carriers in North America
- Compatible with call detail records (CDR) from third-party providers, including Telecom Expense Management Systems (TEMS)

### SAAS-Based Offering

- Provides administrative access to portal
- Scalable tool with bulk import capabilities
- Fast initial set up
- Invisible to users
- Monthly reporting

### Driver Behavior Modification

- Highlights at-risk drivers
- Sends compliance reports directly to drivers
- Supports safety rewards and recognition programs

### Robust "Distraction" Reporting

- Risk Dashboard provides cell phone usage events per trip, per mile, per hour as well as total incidents
- Includes average call duration and talk-time as percent of total trip
- Allows drill down from company to driver to trip to event including map and time-based visualization.
